1987 CENSUS OF AGRICULTURE

ADVANCE STATE REPORT

TEXAS

AC87-A-48-000(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

ANGELINA COUNTY, TX

AC87-A-48-005(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

ARMSTRONG COUNTY, TX

AC87-A-48-011(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

AUSTIN COUNTY, TX

AC87-A-48-015(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

BASTROP COUNTY, TX

AC87-A-48-021(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

BELL COUNTY, TX

AC87-A-48-027(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

BLANCO COUNTY, TX

AC87-A-48-031(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

BOWIE COUNTY, TX

AC87-A-48-037(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

BREWSTER COUNTY, TX

AC87-A-48-043(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

BROOKS COUNTY, TX

AC87-A-48-047(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- - Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

BROWN COUNTY, TX

AC87-A-48-049(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

BURLESON COUNTY, TX

AC87-A-48-051(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

BURNET COUNTY, TX

AC87-A-48-053(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

CALLAHAN COUNTY, TX

AC87-A-48-059(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

CAMP COUNTY, TX

AC87-A-48-063(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

CARSON COUNTY, TX

AC87-A-48-065(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

CASTRO COUNTY, TX

AC87-A-48-069(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

CHILDRESS COUNTY, TX

AC87-A-48-075(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

COKE COUNTY, TX

AC87-A-48-081(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

COLLIN COUNTY, TX

AC87-A-48-085(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

COLLINGSWORTH COUNTY, TX

AC87-A-48-087(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

–	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

COMAL COUNTY, TX

AC87-A-48-091(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

COOKE COUNTY, TX

AC87-A-48-097(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

CRANE COUNTY, TX

AC87-A-48-103(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

DALLAS COUNTY, TX

AC87-A-48-113(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

DELTA COUNTY, TX

AC87-A-48-119(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

DE WITT COUNTY, TX

AC87-A-48-123(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

–	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

DICKENS COUNTY, TX

AC87-A-48-125(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

DONLEY COUNTY, TX

AC87-A-48-129(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

ECTOR COUNTY, TX

AC87-A-48-135(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

EL PASO COUNTY, TX

AC87-A-48-141(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

ADVANCE COUNTY REPORT

FALLS COUNTY, TX

AC87-A-48-145(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

FISHER COUNTY, TX

AC87-A-48-151(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

Symbol	Meaning
-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

[2] Data are based on a sample of farms.
[3] Data for 1982 do not include imputation for item nonresponse.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

FORT BEND COUNTY, TX

AC87-A-48-157(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

–	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

FREESTONE COUNTY, TX

AC87-A-48-161(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

GALVESTON COUNTY, TX

AC87-A-48-167(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

GLASSCOCK COUNTY, TX

AC87-A-48-173(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

GONZALES COUNTY, TX

AC87-A-48-177(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

GRAY COUNTY, TX

AC87-A-48-179(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

GREGG COUNTY, TX

AC87-A-48-183(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

HALE COUNTY, TX

AC87-A-48-189(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

HANSFORD COUNTY, TX

AC87-A-48-195(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

HARDIN COUNTY, TX

AC87-A-48-199(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

HARTLEY COUNTY, TX

AC87-A-48-205(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

HEMPHILL COUNTY, TX

AC87-A-48-211(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- - Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

HILL COUNTY, TX

AC87-A-48-217(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

HOOD COUNTY, TX

AC87-A-48-221(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

HOWARD COUNTY, TX

AC87-A-48-227(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

HUNT COUNTY, TX

AC87-A-48-231(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

JACK COUNTY, TX

AC87-A-48-237(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- - Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

JEFF DAVIS COUNTY, TX

AC87-A-48-243(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

JIM WELLS COUNTY, TX

AC87-A-48-249(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

Symbol	Meaning
-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

JONES COUNTY, TX

AC87-A-48-253(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

KARNES COUNTY, TX

AC87-A-48-255(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

–	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

KENDALL COUNTY, TX

AC87-A-48-259(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

KERR COUNTY, TX

AC87-A-48-265(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

KINNEY COUNTY, TX

AC87-A-48-271(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

LAMAR COUNTY, TX

AC87-A-48-277(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

AC87-A-48-281(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

LEE COUNTY, TX

AC87-A-48-287(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

LIMESTONE COUNTY, TX

AC87-A-48-293(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

LLANO COUNTY, TX

AC87-A-48-299(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

LUBBOCK COUNTY, TX

AC87-A-48-303(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

MC LENNAN COUNTY, TX

AC87-A-48-309(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

MARION COUNTY, TX

AC87-A-48-315(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

–	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

MATAGORDA COUNTY, TX

AC87-A-48-321(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

MEDINA COUNTY, TX

AC87-A-48-325(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

MILAM COUNTY, TX

AC87-A-48-331(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

MONTAGUE COUNTY, TX

AC87-A-48-337(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- – Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

Symbol	Meaning
-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

MORRIS COUNTY, TX

AC87-A-48-343(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

NACOGDOCHES COUNTY, TX

AC87-A-48-347(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- - Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

NOLAN COUNTY, TX

AC87-A-48-353(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

OLDHAM COUNTY, TX

AC87-A-48-359(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

PANOLA COUNTY, TX

AC87-A-48-365(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

PARMER COUNTY, TX

AC87-A-48-369(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

POTTER COUNTY, TX

AC87-A-48-375(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

RANDALL COUNTY, TX

AC87-A-48-381(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

RED RIVER COUNTY, TX

AC87-A-48-387(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

- - Represents zero.
- (D) Withheld to avoid disclosing data for individual farms.
- (X) Not applicable.
- (Z) Less than half the unit shown.
- (NA) Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

ROBERTS COUNTY, TX

AC87-A-48-393(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. 1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

ROCKWALL COUNTY, TX

AC87-A-48-397(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

–	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

SABINE COUNTY, TX

AC87-A-48-403(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

SAN PATRICIO COUNTY, TX

AC87-A-48-409(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

SCURRY COUNTY, TX

AC87-A-48-415(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

AC87-A-48-419(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

SOMERVELL COUNTY, TX

AC87-A-48-425(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

STERLING COUNTY, TX

AC87-A-48-431(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

SWISHER COUNTY, TX

AC87-A-48-437(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

TERRELL COUNTY, TX

AC87-A-48-443(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

THROCKMORTON COUNTY, TX

AC87-A-48-447(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

TRAVIS COUNTY, TX

AC87-A-48-453(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

–	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

UPSHUR COUNTY, TX

AC87-A-48-459(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

VAL VERDE COUNTY, TX

AC87-A-48-465(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

WARD COUNTY, TX

AC87-A-48-475(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

WHARTON COUNTY, TX

AC87-A-48-481(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

WILBARGER COUNTY, TX

AC87-A-48-487(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

AC87-A-48-491(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

WILSON COUNTY, TX

AC87-A-48-493(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

WISE COUNTY, TX

AC87-A-48-497(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.

1987 CENSUS OF AGRICULTURE

ADVANCE COUNTY REPORT

YOUNG COUNTY, TX

AC87-A-48-503(A)
Issued April 1989

This report presents advance statistics from the 1987 Census of Agriculture. Advance reports are being published separately on a flow basis for each county with 10 farms or more, each State, and the United States. This series provides information on major data items together with comparable data from the 1982 census. The data items presented are the same for all States and counties, except selected crops harvested, which vary by State.

Inventories of livestock, poultry, and other specified items are as of December 31 of the census year. Production and sales data for crops and livestock are for the calendar year, except a few crops (such as citrus) for which the production year overlaps the calendar year.

Data for farms, acreages, and inventories for 1987 and 1982 are comparable. Dollar values have not been adjusted for changes in price levels between census years.

The Volume 1, Geographic Area Series, includes results for all data items collected in the census. The volume 1 appendixes provide a detailed description of how the census was taken, pertinent definitions and explanations, and measures of the reliability of the data.

Definition of farm—Since the 1974 census, a farm has been defined as any place from which $1,000 or more of agricultural products were produced and sold or normally would have been sold, during the census year.

Reliability—The census of agriculture enumerates all identified farm and ranch operations in the United States. Sampling is used to collect data for selected items and to account for nonresponding farm operations. Thus, the results in this report are subject to sampling variability as well as reporting and coverage errors.

Acknowledgments—Special tribute is paid to the millions of farm and ranch operators and other agriculture-associated people who furnished the individual reports from which these statistical summaries were compiled. Also acknowledged are the contributions of the U.S. Department of Agriculture and other public and private agencies that gave their support to the census program.

Symbols—The following symbols are used throughout the tables:

-	Represents zero.
(D)	Withheld to avoid disclosing data for individual farms.
(X)	Not applicable.
(Z)	Less than half the unit shown.
(NA)	Not available.

If you have any questions concerning the statistics in this report, please call Agriculture Division, Bureau of the Census (301) 763-1113.
